

## ACTIVATED CARBON CARTRIDGES – CARBOPHASE - CBP

### SPECIFICATIONS

CARBOPHASE series cartridges contain 100% virgin granular flake carbon activated via a high-temperature steam process. This process optimises the carbon's ability to retain even very heavy impurity molecules. CARBOPHASE series cartridges guarantee long life, high performance and a quality product.

Available in Vertical or Radial versions.

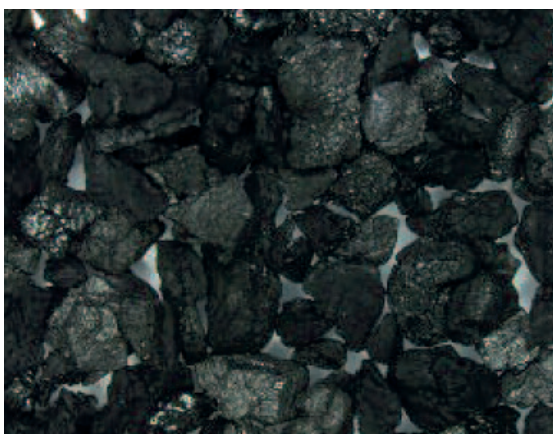

The vertical version increases contact of the fluid with the carbon compared to the radial version with a 30% increase in retention capability.

### APPLICATIONS

- Absorption of impurities from liquids such as:
  - Water
  - Amines
  - Glycol
  - Selexol
  - Sulfinol
  - Lubricating oils

*Magnified activated carbon*

COMPOSITION CODE	CBP	V	11	36
	Model	Version	Ø Outer	Height H
		V = Vertical	6 = 6"	20 = 20.25"
		R = Radial	11 = 10.75"	22 = 22.25"
				36 = 36"
